

GRIMALDI GROUP

The Grimaldi Group is deeply committed to the concept of a sustainable and environmental friendly mobility through the development of logistic solutions based on energy efficiency and GHG reduction principles. It is hereby stated that:

Customer Name	Reference Year
LCT	2018

by choosing, in 2018, the Motorways of the Sea of the Grimaldi Group as intermodal transport solution instead of the road modality, has contributed to reduce the CO_{2e} emissions in the atmosphere of:

- 20 595 ton CO_{2e}

The CO_{2e} emissions reduction are evaluated in accordance with the “Rina rules for the validation of CO_{2e} index calculation”.

Issued in Naples

On: 01 October 2019

This figure of CO_{2e} emissions reduction obtained choosing motorways of the sea of Grimaldi Group instead of road modality, has been evaluated using environmental indexes, defined as grCO_{2e}/km, of 27 ships owned and operated by Grimaldi Group, these indexes are verified by Rina service spa through “Rina rules for the validation of CO_{2e} index evaluation” with in-office and on-board specific audits to check data declared.

The comparison of CO_{2e} emissions has been done evaluating the CO₂ emitted to transport one trailer using one of 27 ships of motorways of the sea of Grimaldi Group against the CO_{2e} emitted by one lorry Euro VI with trailer considering same departure and arrival points.
